

CC - 2000

Features:

- 32 Bit RISC Processor
- 1-RS232 Port
- 1-RS232/RS485 Port
- Optional 10/100Base T Port
- Modbus RTU Master/Slave Communications
- Expandable I/O
- Preprogrammed Applications Such As:
 - A. Pump Control
 - B. VFD Pump Control
 - C. Tank RTU
 - D. Valve Control
 - E. Water Plant Filter Control
 - F. RTU Functionality for all applications
- Applications Configurable via User-Friendly Interface
- Integrated Hardware Watchdog Timer

The CC - 2000 is a dedicated application controller with all the power of a custom programmed PLC, in a user-friendly configurable platform. Chase Controls dedicated controllers, are designed and preprogrammed with multiple water and wastewater applications, ranging from simple pump / wet well control to complex water plant filter control, all in a single compact footprint.

This 32-bit controller offers the power and performance required for real-time communications, with short program scan times, as well as a wide range of digital and analog interface options. The controllers industry standard Modbus RTU communications, can be configured as a Modbus RTU Master or Slave, which simplifies integration with any SCADA software, HMI touch screen, and other intelligent instrumentation.

The CC - 2000 provides flexible communication with 2 serial RS232/RS485 ports and for applications using an Ethernet LAN or WAN, a optional 10/100BaseT Ethernet port is available. For those challenging remote applications, the CC - 2000 supports connection over serial radio, Ethernet radio, cellular radio, and phone lines.
